

THE LEADERSHIP INTERNATIONAL ACADEMY

ASSIGNMENT 2

SUBJECT : GEOGRAPHY

CLASS : SS1

OBJECTIVE

(10 Marks)

1. The gradual breakdown of rocks in situ by either physical or chemical process is called (A) Erosion (B) Denudation (C) Weathering (D) Deposition
2. Which of the following is not a form of precipitation?
(A) hail (B) dust (C) dew (D) snow
3. Which of the following lines could be described as a Great Circle? The (A) tropic of cancer (B) tropic of capricorn (C) equator (D) arctic circle
4. Denudation process involves (A) reshaping of the earth by agents of transportation (B) reshaping of the earth by agents of deposition (C) reshaping of the earth by evolution (D) destruction wastages and loss of earth's surface
5. In the desert region the most prominent agent of erosion is (A) thunderstorms (B) rainfall (C) rivers (D) wind
6. Residual mountains occur when (A) there are faults on the earth's crust (B) the earth's crust bends due to compression (C) the general level of land is lowered by agents of denudation (D)

materials are ejected from the interior of the earth and deposited on the earth's surface

7. The lower course of a river is usually associated with the formation of

Options (A) rapids and waterfalls (B) meanders and interlocking spurs

(C) v-shaped valleys (D) ox-bow lakes

8. The ultimate source of energy in the biosphere is (A) the moon (B) the sun (C) petroleum (D) electricity

9. Inselberg may best be described as (A) an iceberg left over by moving ice sheet (B) a barge left on water by melting ice (C) a residual hill with steep sides and usually exposed by denudation (D) mountains of deposition

10. One of the features found in the upper course of a river is (A) gorge (B) u-shaped valley (C) meander (D) levee

11. Which of the following is a feature of limestone regions? (A) batholith

(B) cinder cone (C) crater (D) stalagmite

12. Fold mountains are basically formed as a result of

(A) coriolis force (B) tensional force (C) compressional force (D) gravitational force

13. Which of the following is not a depositional lake? (A) flood plain lake

B) ox-bow lake (C) barrier lake (D) carter lake

14. The process of weathering in limestone region is mainly

(A) hydration (B) exfoliation (C) solution (D) oxidation

15. Abrasion, attrition and deflation are processes of

(A) river erosion (B) coastal erosion (C) wind erosion (D) glacial erosion

16. All the following are found in the upper course of a river except

(A) v-shaped valleys (B) ox-shaped lakes (C) interlocking spurs (D) waterfalls

17. Plung pool is a feature (A) river meanders (B) interlocking spurs (C) waterfalls (D) water rapids

18. A river transport its load through the following processes except

(A) solution (B) suspension (C) traction (D) plucking

19. All the following are features produced by wind erosion except

(A) rock pedestals (B) zeugens (C) rift valleys (D) yardangs

20. 'It is crescentic or moon-shaped and occurs transversely to the direction of the prevailing wind'. The above statement is a description of a

A) yardang (B) barchan (C) zeugen (D) rock pedestal
